Fastening Solutions for Plastics

**Emhart[®]
Teknologies**
DODGE[®]

Creating the Future Worldwide.

At **Emhart**, creating the future is about growth, about change and about taking risks.

It is who we are and what we do. Our focus is to reduce the overall product assembly costs of our customers by anticipating needs and meeting those needs with technology and market-driven solutions.

Emhart is a global leader in the design and creation of unique assembly technologies, delivering depth and breadth of service and product through a flexible, cross-functional global organization.

Owning The Customer's Total Experience

We provide every customer with the capability to satisfy every aspect of fastening and assembly technology. From concept through installation, around the corner and around the globe, Emhart develops and delivers solutions for challenging assembly applications.

Technology Optimization

Emhart has the ability to objectively match customer priorities, applications and manufacturing environment with the most appropriate assembly technology and fastening systems. We provide this capability through Application Engineers, and Mobile, Stationary and Virtual Innovation Centers located around the world. Each is electronically linked, capable of sharing application data and new design concepts with each other as well as with our customers.

System Integration

Emhart provides technological solutions in over 100 different countries. For each of these countries and for every application, we deliver innovative, integrated systems solutions from concept and design through system integration, worldwide.

Product Consultancy

Emhart employs Application Analysis and Value Engineering to demonstrate how our technology can enhance the assembly process, and Value Analysis to detail the cost/benefit relationship of applying our technologies.

Innovative Services

Emhart is infused with the spirit and culture of innovation. From our Stationary Innovation Centers to our unique Mobile Innovation Centers, Emhart has built a worldwide service and technology infrastructure to support our customers, 24 hours a day, seven days a week.

Dodge

Fastening Solutions for Plastics

Dodge[®] inserts for plastics are widely recognized and highly regarded products in the fastening market. Since the 1950's, Dodge has been identified as the leader in its industry which can largely be attributed to its focus on providing high quality products.

DODGE Products are available in various types and styles to suit almost any insert application in plastic. DODGE inserts are designed to provide the high performance strength values of molded-in inserts while still retaining all of the economical advantages of insert installation after molding. In addition to the standard products, **DODGE** has also developed insert types and styles for specific applications.

DODGE Sales Engineers have broad experience in insert technology and are available to provide on-the-spot answers to any of your technical questions. Our highly trained Applications Engineering staff in Danbury, Connecticut will be glad to furnish technical assistance, compile test data, prepare samples for your evaluation and make specific recommendations on insert designs, installations and assembly systems. Our fastening experience and expertise is available for designing special inserts for unique or critical applications. Designs such as studs, mold-in inserts, and compression limiters have been developed and supplied by **DODGE**.

DODGE products are manufactured to the same exacting quality systems required by the military, aerospace and automotive standards. The Danbury manufacturing facility has been certified ISO 9001, QS 9000 and ISO 14001. We are committed to an ongoing and never ending process of quality improvement and total customer satisfaction.

Ultrasert I

8 & 9

- Fluted for ultrasonic or heat installation
- Tapered for accurate positioning prior to installation
- Vertical flutes provide high torque resistance
- Stepped inclined ribs provide optimum tensile strength
- Gradual external taper optimizes flow of plastic for rapid and smooth installation

Ultrasert II & Ultrasert II Screw-Lock

10 – 13

- Most widely accepted and used
- Tapered for easy heat or ultrasonic installation
- Diagonal knurls for optimum torque resistance
- Undercuts for superior tensile strength
- Screw-Lock has unique locking element for vibration applications
- Eliminates need for plastic pellets or patches on screws
- Ideal for adjusting screw applications
- Available in two lengths for design flexibility; Screw-Lock in long length only

Ultrasert III

14 & 15

- Designed for high volume production
- Can be installed ultrasonically, with heat, or molded in
- Symmetrical design eliminates orientation before installation
- Ideal for automated installation feeders
- Lead-in pilots at both ends assure accurate positioning prior to installation
- Opposing diagonal knurls provide torque resistance
- Undercuts provide tensile strength

Ultrasert IV

16 & 17

- Designed for installation in straight holes
- Lead-in pilot at end assures accurate positioning prior to installation
- Opposing diagonal knurls provide excellent torque resistance
- Undercuts provide tensile strength

Ultrasert IV Flange

18 & 19

- Same as Ultrasert IV but with flange on the knurled end
- Flange provides a large bearing surface, an advantage in weaker plastics
- Provides high strength when used in a reverse screw entry where the load is taken up by the flange, i.e. screw entry opposite flange end
- Ideal for use as electrical contact or fastening terminal connectors

Ultraseal™

20

- Provides positive seal between insert and parent material for use in pressure applications utilizing high temperature O-ring
- Eliminates the need to mold or machine threads
- Easily installs with heat
- Available in 1/8, 1/4, and 3/8 NPTF threads

Ultra-Mold™

21

- Revolutionary two-piece design allows full thread engagement without the need for extra space
- Controlled minor diameter reduces insert movement during molding assuring accurate alignment
- Unique counterbore accurately positions insert over molding pin and allows for easy bolt entry during assembly
- No machining chips to contaminate final product
- Can also be installed using heat

- 22 **Miniature Inserts**
- Available in two styles to accommodate various applications
 - Symmetrical style is designed for high volume production, no special orientation required saving time and lowering overall cost
 - Flanged style provides larger bearing surface which is ideal for electrical contact and provides high strength in reverse screw entry application
 - Either style can be installed with heat

- 23 **Compression Limiters**
- Non-threaded bushing to take bolt load instead of the part
 - Eliminates bending or cracking of plastic part due to tightening of bolt
 - Custom designed for each application
 - Can be installed with heat or ultrasonics or by pressing in

- 24 & 25 **Standard Expansion**
- Installs without heat or ultrasonics
 - Easy to install, two piece insert for use in blind holes in thermoset or thermoplastic materials
 - Depressing the captivated spreader plate expands the knurled portion, permanently anchoring the insert
 - Can be installed protruding above the surface for use as a locating device

- 26 & 27 **Flanged & Clinch Expansion**
- Flanged insert is ideal for electrical contact or fastening terminal connections
 - Can also be used to join mating parts by inserting through mating part and into receiving hole of parent material
 - Clinch insert is same as the Flanged insert but can be clinched over a terminal connector for electrical contact
 - Used extensively in electrical industry
 - Simultaneous installation and clinching operation using simple press-type tool
 - Both styles are excellent for use in thin-section applications since flange absorbs much of the installation force
 - Both styles install by depressing the captive spreader plate which expands the knurled portion, permanently anchoring the insert

- 28 & 29 **Self Threading & Flanged Self Threading**
- Internally and externally threaded with two slots which provide cutting edges similar to a tap
 - Insert cuts its own thread when driven into a cored or drilled hole
 - Friction between insert and plastic permanently anchors the insert
 - Can be installed with a tap wrench or drill press with tapping head
 - Available with or without a flange

- 30 **Spred-Lok**
- One-piece insert with unique, slotted, expandable outside diameter
 - Can be installed in thermoset or thermoplastic materials
 - No special tooling required — simply press in
 - Mating screw expands the insert locking it in place
 - Use in blind or through holes
 - Available with or without a flange

Dodge Capabilities

Customer Service

- Dedicated and caring people trained on sophisticated computerized equipment to ensure...
Prompt pricing and accurate delivery information
Work in progress status
J.I.T. scheduling

Design & Engineering Support

- Development support includes...
Conceptual ideas
Preliminary designs and drawings
Value Engineering

Product Development

- Pre-production samples and engineering prototypes are produced on state-of-the-art CNC equipment.
- New products are thoroughly tested before leaving our facility.

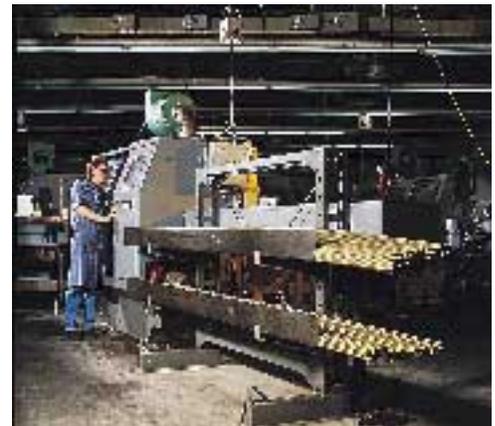

Quality

- ISO 9001 & QS 9000 Certified
- Lot control ensuring product traceability.
- Statistically controlled manufacturing processes.
- Material certification.
- All products manufactured in the U.S.A.

Production

- 150,000 square foot manufacturing facility.
- Dedicated to delivering high quality products on time.
- Unique machining techniques allow us to be more versatile and efficient.
- Utilize the best machining materials available which meet stringent internal specifications.
- Products controlled through MRP systems to ensure on-time delivery.
- In-House tooling capabilities.

Dodge Capabilities

Technical Seminars

- Formal technical seminars offered to engineering, manufacturing, purchasing and quality personnel.
- Instructors include representatives from our marketing and engineering departments.

Factory Trained Sales & Applications Engineers

- Dodge has over 50 factory-trained sales engineers located throughout North America.
- We provide extensive knowledge and expertise in insert technology.
- Sales engineers will conduct on-site engineering seminars to ensure that your group is aware of the latest developments in plastic fastening technology.

Inventory

- An extensive inventory is managed for both standard and custom inserts.
- State-of-the-art packaging equipment guarantees that box quantities are exact and finished goods are routed to the warehouse to facilitate just-in-time delivery.
- Broad range of inventory is conveniently located throughout North America.

Insert Cleaning

- Special cleaning systems ensure maximum cleanliness of our inserts.
- Cleaning process eliminates brass chips or oil that may contaminate or damage an entire system.
- Adhesive grid may be added to the shipping container to trap any loose particles created by handling or transportation.

- Applications engineers are ready to evaluate and recommend insert designs and installation methods. They also furnish samples, conduct product testing and compile test data.

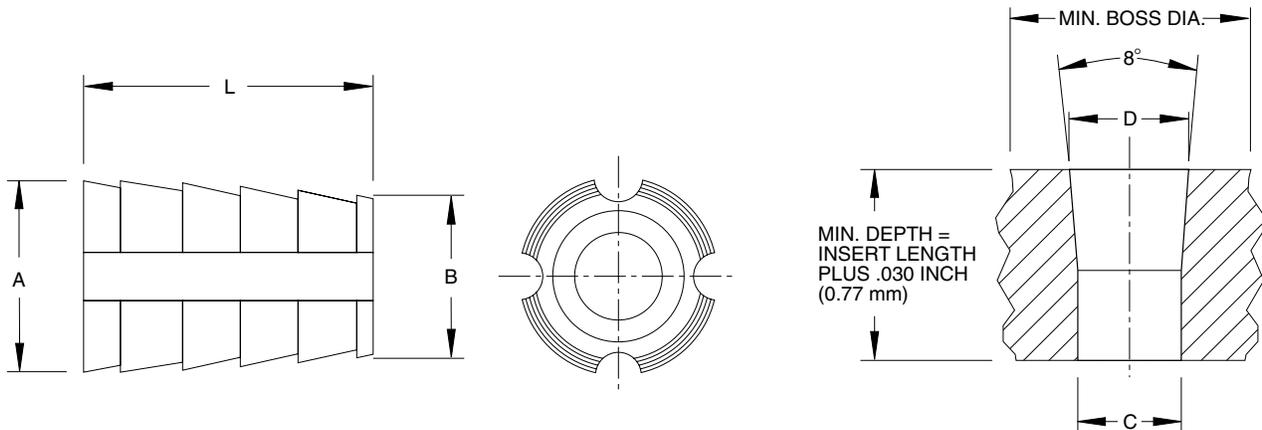

Ultraser I

- Vertical flutes and horizontal fins provide superior assembly strength
- Tapered design assures rapid and accurate alignment prior to installation
- Flute and fin design provides a chip-free environment

Ultraser I

The Ultraser I insert is a fluted brass insert designed for ultrasonic or heat installation into thermoplastics. The tapered design allows for accurate positioning in the receiving hole ensuring proper alignment prior to installation. The vertical flutes provide resistance to rotation and the stepped inclined ribs are for

tensile strength. The gradual external taper optimizes the flow of plastic as the insert/plastic interfaces, permitting a smooth and rapid installation.

†Screw failed

NOTE...

The test data should be considered as average values for the general families of plastics indicated. Critical application requirements may necessitate further specific testing.

The plastic material failed in all cases except where noted.

Ultraserts

Dodge Ultraserts can be installed using ultrasonic equipment (moderate to high production) or thermal installation equipment (prototype work and low quantity production). Thermal equipment can be as simple as a soldering iron held by hand or mounted in an arbor or drill press. More refined equipment is available with adjustments and settings for precise uniform installations.

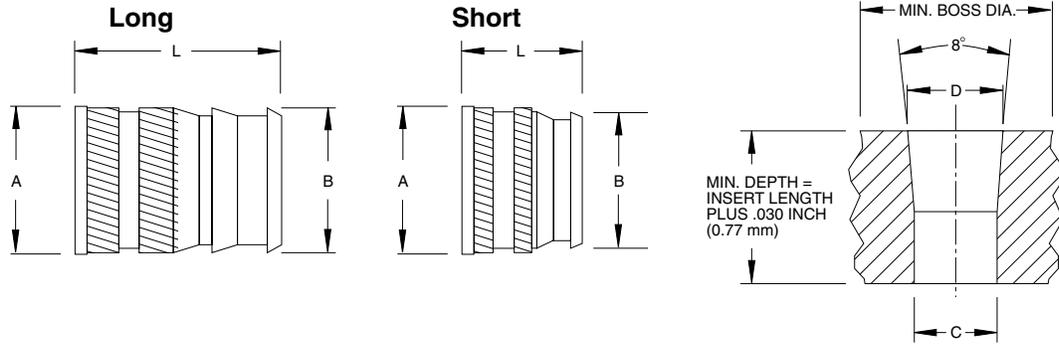

Ultraser II

- Installed ultrasonically or with heat
- Two lengths to choose from allowing design flexibility
- Diagonal knurls & undercuts provide superior assembly strength
- Excellent design for automated systems

NOTE...

The test data should be considered as average values for the general families of plastics indicated. Critical application requirements may necessitate further specific testing.

The plastic material failed in all cases except where noted.

Ultraserts

Dodge Ultraserts can be installed using ultrasonic equipment (moderate to high production) or thermal installation equipment (prototype work and low quantity production). Thermal equipment can be as simple as a soldering iron held by hand or mounted in an arbor or drill press. More refined equipment is available with adjustments and settings for precise uniform installations.

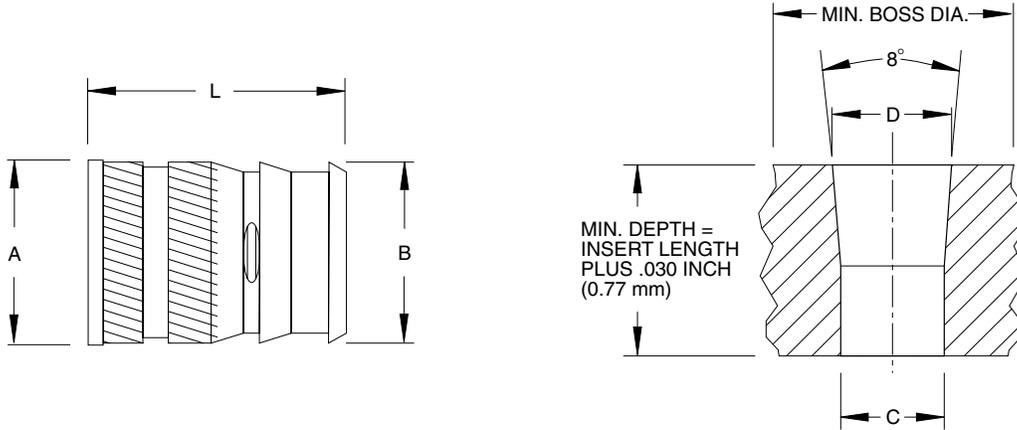

Ultraser II Screw-Lock

- Unique internal locking element
- Locks screws in place
- Diagonal knurls and undercuts provide superior assembly strength

Ultraser II Screw-Lock

The Screw-Lock Ultraser II is designed for use in vibration applications or where periodic screw adjustment is required. It features a unique internal locking element that is reusable for many

cycles. Screw-Locking Ultraser II inserts can be installed with either ultrasonics or heat.

**Prevailing torque values are based on the recommended use of cadmium plated screws. Any other types of screws may affect locking torque values and cycles.

NOTE...

The test data should be considered as average values for the general families of plastics indicated. Critical application requirements may necessitate further specific testing.

The plastic material failed in all cases except where noted.

Ultraserts

Dodge Ultraserts can be installed using ultrasonic equipment (moderate to high production) or thermal installation equipment (prototype work and low quantity production). Thermal equipment can be as simple as a soldering iron held by hand or mounted in an arbor or drill press. More refined equipment is available with adjustments and settings for precise uniform installations.

Ultraser III

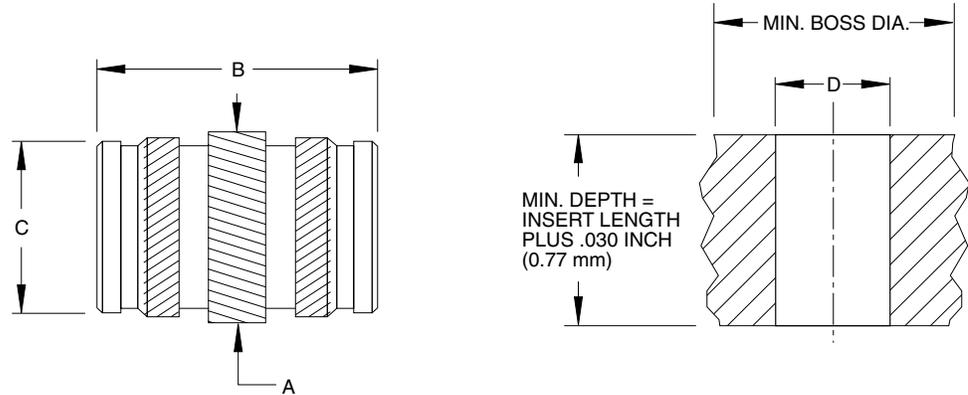

- Symmetrical design for low cost, high volume production
- No orientation required

Ultraser III

Ultraser III is a symmetrical insert designed for high volume production. The inserts can be loaded into an automatic feeding system without the need for special orientation. The inserts can be installed ultrasonically, with heat or can also be

molded in place. The symmetrical design eliminates the time required for orientation which produces higher production and lower overall cost.

Insert Specifications...

Ultrasert IV & Test Data

Ultrasert IV

Ultrasert IV inserts are designed to be installed into straight holes. A lead-in pilot at the front end of the insert accurately positions the insert prior to installation. It is designed with opposing diagonal knurls that provide excellent torque resistance and undercuts for tensile strength. Ultrasert IV inserts are designed for ultrasonic or heat installation into thermoplastics or structural foam materials.

Ultrasert IV – Test Data

Note: Test data should be considered as average values for the general families of plastics indicated. Critical application requirements may necessitate further specific testing. The plastic material failed in all cases except where noted.

Ultrasert IV Flanged & Test Data

Ultrasert IV Flanged

The Flanged Ultrasert IV insert has the same characteristics as the standard Ultrasert IV with the added benefit of a flange. The flange provides a large bearing surface which is advantageous in weaker plastics. For high strength assemblies they can be used in a reverse screw entry.

Ultraseal™ Inserts

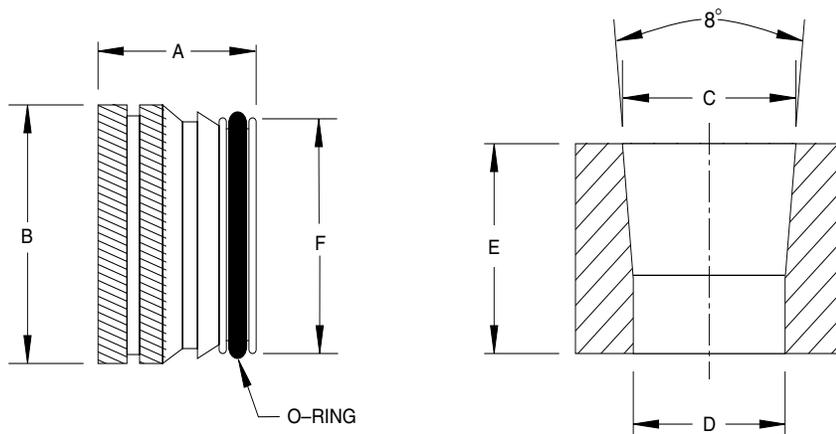

- Provides a pressure tight assembly
- Easy installation and self alignment
- Exceeds rotational and tensile requirements

Ultraseal™ Pipe Thread Inserts for Plastics

The Ultraseal Pipe Thread Insert is an innovative design that provides a pressure tight seal over a broad range of operating temperatures.

Ultraseal Pipe Thread Inserts are designed to be installed after molding using either ultrasonics or heat. They provide the high performance strength values of molded-in inserts while still retaining all the economical advantages of insert installation after molding.

The O-Ring is the key feature that provides the pressure tight seal. It withstands 600°F installation temperature and will function at operating temperatures up to 400°F. When installed into the recommended hole size it will offer a high performance seal between the plastic and the insert.

INSERT SPECIFICATIONS				HOLE RECOMMENDATION		
Thread Size	Part Number*	Length A	Diameter B	Diameter C	Diameter D	Length Emin
1/8-27	6092-2**BM400	.400	.614	.607	.567	.430
1/4-18	6092-4**BM475	.475	.736	.727	.685	.505
3/8-18	6092-6**BM500	.500	.883	.870	.817	.530

* Note: To order, complete the part number by adding the code letters which correspond to the type of internal thread required from the chart below. Example: For **1/8-27 NPT brass insert**, the part number will be **6092-2PTBM400**.

THREAD TYPE	
Thread	Code
ANPT	AT
NPT	PT
NPTF	TF
NPSI	SI
NPSF	SF
NPSC	SC

Assembly Strength Data

Dodge Ultraseal Pipe Thread Inserts provide high tensile and torque loads in addition to their sealing features. The combination of diagonal knurls and undercuts provides a unique anchoring arrangement. Average test values are for reference purposes.

Size	Tensile	Rotational Torque	Recommended Pressure
1/8-27	526 lbs	335 lb.-in	Up to 250 PSI
1/4-18	1000 lbs	575 lb.-in	Up to 250 PSI
3/8-18	1586 lbs	950 lb.-in	Up to 250 PSI

Material: 30% Glass filled nylon 6/6

- Two-piece design allows full thread engagement in minimum space
- Controlled minor diameter assures accurate alignment
- Can be installed with heat as well as molded in

Ultra-Mold™ Inserts

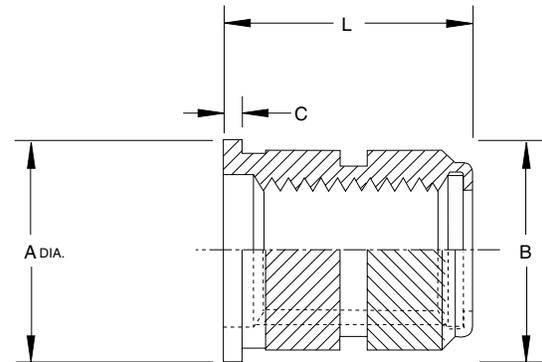

Ultra-Mold

The Ultra-Mold insert was designed for applications where a molded-in insert is more economical than post molding. The unique two-piece design means that there are full threads throughout the entire length of the insert. No added material is required for imperfect threads and drill point. This saves space and weight. The manufacturing process eliminates machining chips and oil residue that can contaminate plastic molded parts.

The Ultra-Mold insert has a controlled minor diameter which reduces movement during molding and assures accurate alignment of the insert in the part. Ultra-Mold is designed with a unique counterbore that accurately positions the insert over the molding pin and allows easy bolt entry at assembly. The insert design ensures optimum strength performance in a minimum of space.

Ultra-Mold Conventional

The unique two-piece design allows full and complete threads throughout the entire length of the insert. No extra material is needed for imperfect threads and drill point. This saves space and weight; it also reduces costs.

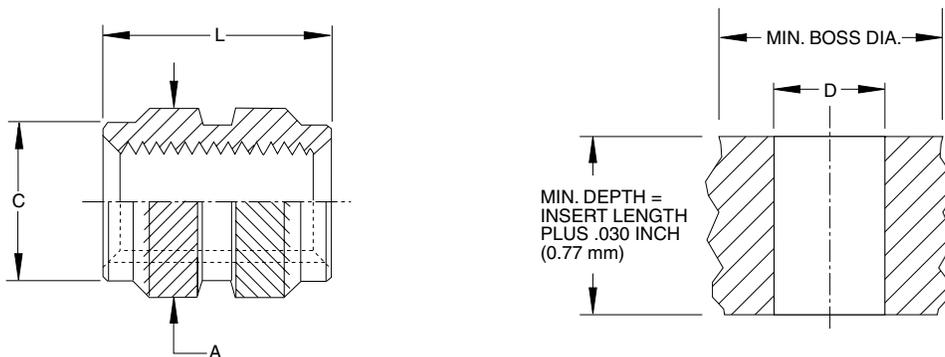

Miniature Inserts

- Available in flanged and symmetrical styles
- Lead in pilot positions insert for installation
- Designed for installation into straight holes
- Can be molded in or installed with heat

Miniature Inserts

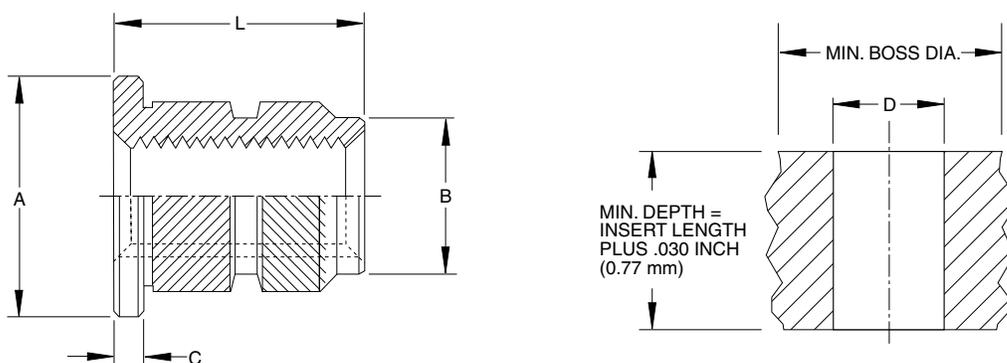

Dodge Miniature Inserts are designed to meet the requirements of today's electronic, telecommunications and computer markets. The trend towards more miniaturized and compact consumer products has necessitated the use of smaller screws which must be reusable without the possibility of thread damage. Dodge Miniature Inserts provide the strong, reusable threads designers need. They are available in two styles. The symmetrical style is designed for high production. They can be loaded and fed through automatic installation equip-

ment without the need for special orientation. This eliminates the time required for orientation, which lowers overall cost by increasing productivity. The flanged style insert provides a larger bearing surface for electrical contact and greater strength in weaker plastics. Both inserts are designed with opposing diagonal knurls and undercuts for exceptional rotational and tensile strength. They can be installed with heat or molded in.

Compression Limiters

Compression Limiters

Dodge offers compression limiters for applications where the tightening load of the bolt or screw will compress, crack or otherwise damage the plastic component. Compression limiters are non-threaded bushings made of various materials. They are designed with various knurl configurations and undercuts in order to meet the

strength requirements of the specific application. These inserts can be installed with heat or ultrasonics, or they can be pressed in place. Our Dodge Applications Engineers are available and ready to assist you in the design and development of the optimum bushing for your application. We can also provide sample parts and test data.

- Eliminate cracking of plastic parts due to bolt load
- Can be pressed in or installed with heat or ultrasonics
 - Custom designed for each application

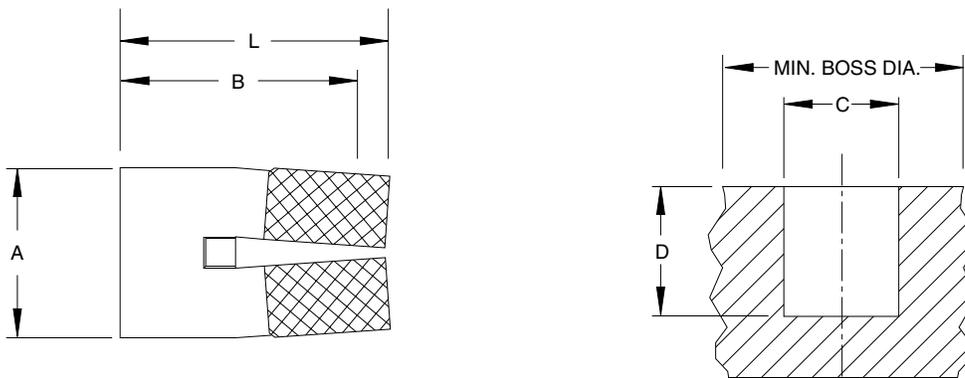

Standard Expansion

- Versatile — can be used in any type of plastic
- Simple press-in installation

Standard Expansion Inserts

Standard Expansion Inserts are easy to install, two-piece, brass, expandable inserts for use in blind holes in thermoset or thermoplastic materials. When the captivated spreader plate is depressed, the knurled portion of the insert expands, permanently anchoring the insert in the hole.

If desired, the insert can be installed to protrude above the surface of the part to act as an assembly-locating device.

*To achieve maximum strength, spreader plate must be pushed to the bottom of the hole as shown in Fig. 2.

Expansion Principle

- Standard
- Flange
- Clinch Inserts

These inserts are two piece units consisting of threaded insert and a captivated spreader plate. When this spreader plate is depressed, the knurled portion of the insert expands and anchors the insert in the hole.

Expansion inserts must be expanded by depressing the spreader plate prior to insertion of the screw. The screw will not expand the insert and lock it in place.

The Expansion Inserting Tooling shown on page 27 provides an economical and efficient means of installing the inserts.

The Dodge hand tool works best in thermoset materials. Since the receiving hole diameter is .002 larger than the insert diameter, the insert drops freely into the hole and is ready to be expanded using this tool.

Fig. 1

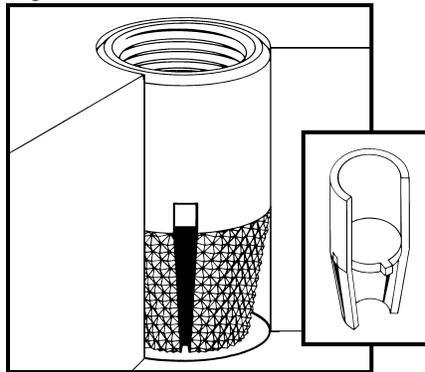

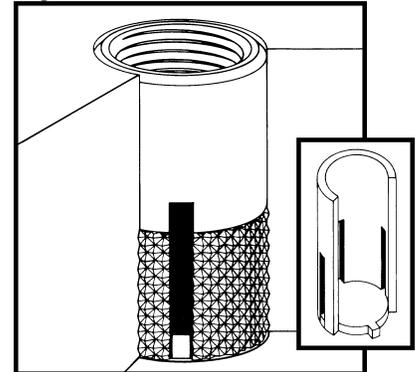

Fig. 2

Expansion inserts are to be used **only** in blind holes.

For thermoplastic materials, the receiving hole diameter is .003 smaller than the insert diameter.

Because there is interference, the insert **must** be pressed to the bottom of the hole prior to expanding it. The shoulder on the tool installs the insert. Once it has bottomed, tension on an internal spring is overcome and the punch depresses the spreader plate permanently anchoring the insert in the hole.

DO NOT push the spreader plate too deep. This will reduce the holding strength of the insert significantly.

NOTE...

The test data should be considered as average values for the general families of plastics indicated. Critical application requirements may necessitate further specific testing.

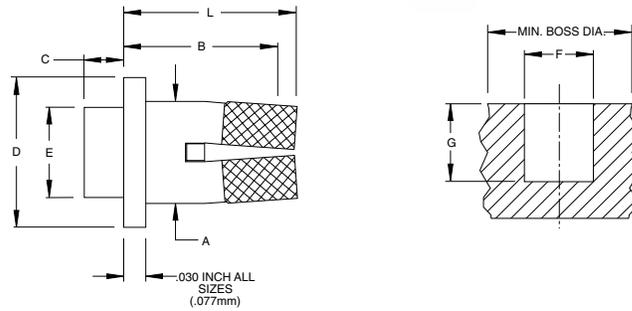

The plastic material failed in all cases except where noted.

Clinch and Flange Expansion Inserts

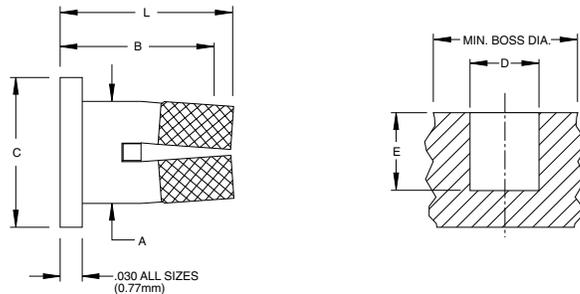

- Same superior design characteristics as Standard Expansion Inserts
- Simple installations

Clinch and Flange Test Data

Clinch Insert

Clinch inserts feature a pilot and a flange and have the same design characteristics as Standard Expansion Inserts. The inserts are used extensively in the electrical industry. The pilot can be clinched over a terminal connector with the flange providing a large surface for electrical contact. The installation and clinching operations are simultaneous using a simple press-in type tool. Like the Flange Insert, much of the installation force is absorbed by the flange allowing use in thin-section applications.

Flange Insert

The Flange Insert in addition to having all of the design features of the Standard Insert, has a flange with a large bearing surface. The flange can be used to make an electrical contact or to fasten a terminal connector. The flange can also be used to join mating parts by inserting the body of the insert through the mating part and into the receiving hole in the parent material. The insert is excellent for use in thin-section applications since the flange absorbs much of the installation force.

*To achieve maximum strength, spreader plate must be pushed to the bottom of the hole as shown in Fig. 2 on page 25.

NOTE...

The test data should be considered as average values for the general families of plastics indicated. Critical application requirements may necessitate further specific testing. The values shown are for Standard Expansion Inserts. These values would also apply to Flange and Clinch Inserts of comparable lengths.

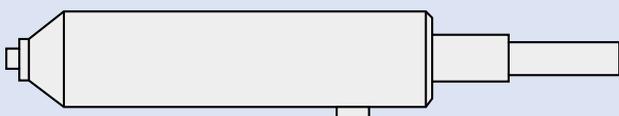

Expansion Insert Tooling

Semi-Automatic Model. May be used to install Dodge Standard Flange and Wedge Inserts. The tool consists essentially of a punch and a spring-loaded sleeve. It **must** be chucked in an arbor press or foot press. It is **not** designed to be driven by a hammer. Basic part number is 79005 for inch and 79027 for metric.

Hand Tool. May be used to install Dodge Standard, Flange and Wedge Inserts. The tool may be used with hammer or chuck in an arbor press or foot press. Basic part number is 79015 for inch and 79017 for metric.

The Clinch Insert Model. Designed to install and crimp Dodge Clinch Inserts. The tool consists of a punch and a spring-loaded sleeve with a radius section which crimps the eyelet portion of the insert over the mating component. It must be chucked in an arbor press or foot press. Basic part number is 79035 for inch and 79047 for metric.

- Ideal for prototype shops and engineering staff
- Recommended for small jobs or prototype development projects
- Complete size range for most applications

Ultrasert II Assortment Kits

- Kits provide design flexibility by including two insert lengths for each thread size.

Each kit contains commonly used thread sizes. Kits are available in both inch and metric inserts. A slide chart containing insert data and instructions for hole preparation is included in each kit.

Research & Development Kits

- Kits provide design flexibility by including two insert lengths for each thread size.
- Soldering iron and installation tips are included for each thread size.

Insert Installation & Troubleshooting

ULTRASONIC INSTALLATION

Ultrasonic installation is recommended for all but the largest insert sizes. Ultrasonic installation generally results in very consistent, stress free assemblies with very short cycle times. In Ultrasonic insertion, the metal insert is designed to partially enter a cored or drilled hole in the thermoplastic part. The vibrating ultrasonic horn contacts the insert causing the vibration to travel through to the interface of the metal insert and the plastic part. Heat generated as a result of the vibration causes the plastic to effectively mold itself to the knurls and undercuts of the insert permanently locking the insert in place.

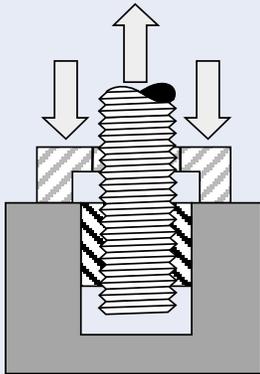

HEATED INSERT INSTALLATION

Inserts may be installed into thermo-plastic materials using various sources of electrically generated energy to heat the insert above the melting point of the thermoplastic part. Inserts may be preheated then pressed into the plastic part or the insert may be piloted into a cored or drilled hole in the plastic part then heated by conduction. Heated insert installation provides a stress free assembly and is recommended for very large insert sizes or when the required fixturing or noise levels associated with ultrasonic installation are prohibitive.

INSTALLATION OF EXPANSION INSERTS

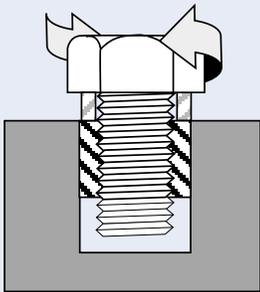

Dodge expansion inserts are easily installed in both high and low production applications. Dodge manufactures hand tools and semi-automatic tools which can be fitted to manual or powered presses. Part numbers and description for installation tools can be found on page 27.

POTENTIAL SOLUTIONS	P R O B L E M									
	Insufficient insert strength (pullout, rotation)	Insert not completely seated	Excessive installation time	Excessive flash on top surface	Excessive flash under insert	Plastic boss bulges or cracks	Welder overloads (cuts out)	Insert damaged (deformed)	Insert raises above top surface after top installation	Installation too noisy
Increase hole diameter										
Increase hole depth										
Increase boss diameter										
Decrease hole diameter										
Verify plastic melt										
Incorrect fixture design										
Countersink/Counterbore hole										
Increase amplitude										
Increase pressure										
Increase weldtime										
Decrease downspeed										
Increase hold time										
Decrease pressure										
Decrease amplitude										
Decrease weld time										
Adjust welder stroke stop										
Pre-trigger ultrasonic energy										
Tune power supply										
Tighten horn, booster, transducer joints										
Use more powerful (wattage) welder										

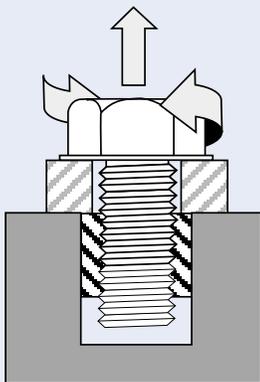

TENSILE STRENGTH

Axial force required to pull the insert out of the parent material at least .020 inches (.5mm).

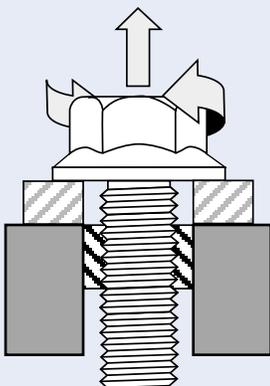

ROTATIONAL TORQUE

Rotational force required to rotate the insert in the parent material. Note that the hardened steel spacer only hits on the insert. It is a good comparative measure of the overall strength of the assembly.

CLAMPLOAD TORQUE

Rotational force required to rotate the insert in the parent material. Note that the hardened steel spacer hits both the parent material and the insert. Mainly used as a strength measure for compression limiters.

JACK-OUT TORQUE

Rotational force required to pull the insert out of the parent material. Note that the hardened steel spacer only hits the parent material. This will allow both rotational and axial forces to be applied simultaneously. The ultimate test of assembly strength. Results may vary depending on the type of bolt used.

Put DODGE to the test...

Our engineers are fastening specialists who take pride in their ability to ***exceed your performance requirements while minimizing costs***. The DODGE database contains thousands of custom insert designs which may meet your requirements or we can create a new design specifically for your application. Send Dodge your existing insert design and we will refine it to increase performance and reduce your costs.

JACK NUT® Threaded Inserts

The **JACK NUT** Threaded Insert is an economical blind fastener designed for assembly-line use in thin, soft, or brittle materials. When tightened, the body collapses to form legs which grip the inside of the mounting surface, leaving a permanent, reusable threaded insert. Available in steel, brass, and steel with PVC or Raintite® coating.

Standard **JACK NUT** Threaded Inserts are manufactured of steel with commercial zinc plating. Brass is available upon special request (brass requires a 50,000 piece minimum order).

All **JACK NUT** threaded inserts can be supplied with coated flanges. Two types of coatings are offered. The first, called Raintite®, is used for sealing ambient moisture. The second is a hard plastic coating (PVC) which is used in areas where additional protection is needed against scratching (for example, painted panels). Both can also assist with galvanic corrosion concerns.

FEATURES

- *Fastens in blind holes*
- *Won't distort or deform soft plastics or thin sheet metals*
- *Fast, inexpensive, and easy to use*
- *Not hole-size sensitive*
- *Fastens securely despite burrs or uneven substrate*
- *Available with "Plastisol" coating for sealing purposes*
- *Suitable for a wide grip range*
- *Can be set with manual or pneumatic tools*
- *Removable*

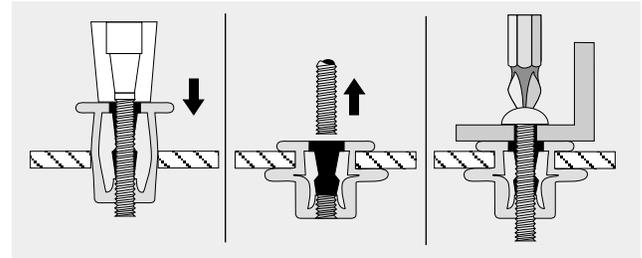

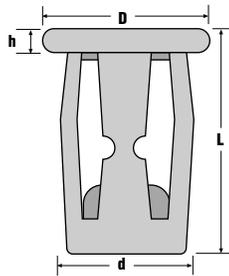

APPLICATIONS

- *Toys*
- *Plastic furniture*
- *Spoilers and other aerodynamic devices*
- *License plate brackets*
- *High-lamp stop lights*
- *Mirrors*
- *Air-conditioning condensers*
- *Fuse boxes*
- *Glove compartments*
- *Speaker housings*
- *Decorative trim*
- *Latch mountings*
- *Truck utility compartments*
- *Luggage carriers*
- *Resonators*

AND MUCH MORE!

JACK NUT® Threaded Inserts

HOW TO INSTALL

1. Thread JACK NUT insert onto mandrel of installation tool, then insert all the way into predrilled hole until flange is firmly against mounting surface.
2. Fully collapse insert, then remove installation tool.
3. Pass machine screw through part to be fastened, then tighten until snug.

JACK NUT Tools

“ROTATIONAL” PNEUMATIC JACK NUT TOOLS

For the high-volume setting of all sizes of **JACK NUT** inserts, these tools set the inserts by rotation, automatically compensating for material thickness variations. Reverses for removal.

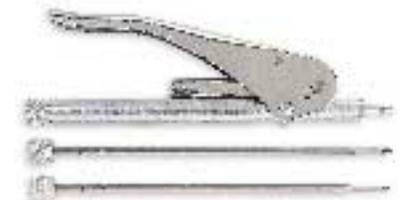

CAT. NO.	JNT-7530	JNT-7529
Weight	1.7 lbs.	2.0 lbs.
L x H x W	8" x 6.5" x 1.5"	9" x 6.5" x 1.5"
Air Pressure	90 PSI	90 PSI
Speed	2300 RPM	750 RPM
Torque	15 in.-lbs.	50 in.-lbs.

HEAVY-DUTY JACK NUT HAND TOOL CAT. NO. JNT 2400

Rugged steel tool uses interchangeable screw-rods to set all sizes. Low grip effort is required, and proper stroke is preset for positive setting without overtightening.

JNT 2400
Weight: 1.3 lbs.
Dimensions:
10-1/2" L x 4" H x 3/4" W

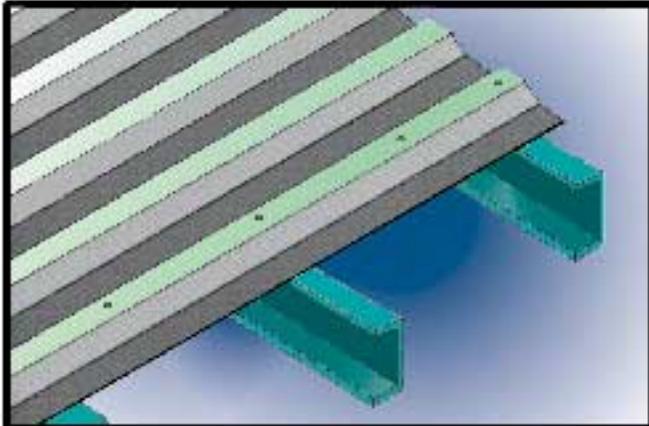

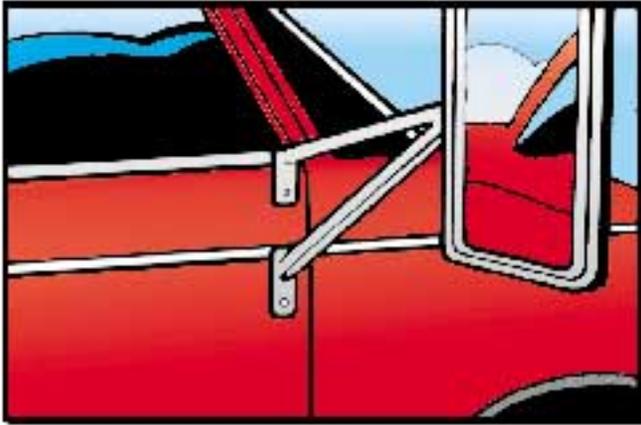

Well-Nut® Threaded Inserts

The **WELL-NUT** Threaded Insert is a flanged neoprene bushing with a brass machine nut molded into one end. Tightening a conventional machine screw thread in the brass nut causes the insert to expand, making a secure fastening. Avail-

able in a variety of rubber compounds for a full range of automotive and industrial environments.

FEATURES

- *Fastens in blind holes*
- *Helps seal out ambient moisture*
- *Muffles noise*
- *Dampens vibration and shock*
- *Helps prevent galvanic corrosion*
- *Ideal for metal-to-plastic and other mixed material fastenings*
- *Removable*
- *Installs with conventional tools*
- *Snap-in feature available*
- *Available in several compounds*
- *One-step installation*
- *Can be used in closed end holes*

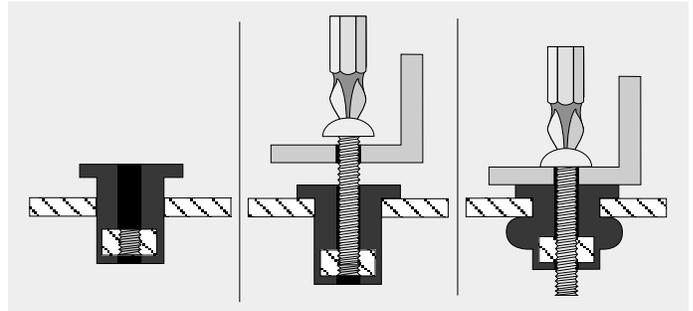

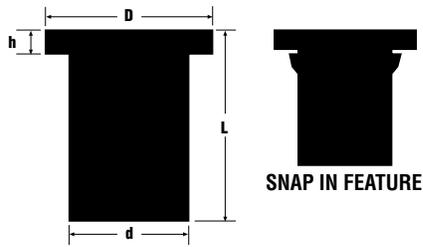

APPLICATIONS

- *Windshield wiper motors*
- *Electric panels*
- *Remote-type air cleaners*
- *Radiator mountings*
- *Heating fan motors*
- *Luggage carriers*
- *Sirens and horns*
- *Electronic sensors*
- *Control modules*
- *Windshield washer reservoirs*
- *Inner door panels*
- *Solar panels*
- *Fan motor mounts*
- *Garage door openers*
- *Marine accessories*
- *Fiberglass building panels*
- *Skylights*
- *Transformers*

AND MUCH MORE!

Well-Nut® Threaded Inserts

HOW TO INSTALL

1. Place Well-Nut insert all the way into pre-drilled hole until flange is firmly against mounting surface.
2. Pass machine screw through part to be fastened.
3. Tighten until snug.
